Let's Get to the Point: Safely Pick Up Litter in Chatham-Kent

Learn what to do if you come across hazardous litter like razor blades, needles, or other sharp objects in your community. Litter can carry germs that make you sick, so it's important to be safe!

- 1. Put on gloves if you have them.
- 2. Bring a puncture proof container with a lid (e.g., peanut butter container, bottle, coffee can) to where you found the hazardous litter and place it on a stable surface beside it.
- 3. Use tongs to carefully collect the hazardous litter. Keep sharp points/edges pointed away from you and never attempt to recap a used needle.
- 4. Place the item(s) into the container pointy end first and close the lid.
- 5. Remove gloves and wash hands with soap and water or hand sanitizer.
- 6. Bring the container to CK Public Health, 177 King Street East, Chatham, for disposal.

Most pharmacies will provide free sharps containers and disposal of used sharps. Contact the pharmacy of your choice and ask about their services.

(A limited supply of sharps containers and tongs are available from CK Public Health)

KEEP SAFETY IN MIND

- Children should NEVER pick up needles! Teach kids to NOT touch sharps and tell an adult
- Wear gloves if you have them
- DO NOT try to recap a needle or break off the sharp end
- Only fill a container ¾ full before getting a new one
- Never put a container with sharps into the garbage or recycling bin

Safely Pick Up Litter in Chatham-Kent

If you are participating in a community cleanup, it is important to follow Public Health guidelines for COVID-19 and be prepared to safely respond to possible hazards like broken glass, needles, nails or other sharp objects. Keep yourself and others safe by reviewing this information before you begin.

Before you start, consider:

- Collecting in groups of two or more people (from your own household)
- Wearing a safety vest or bright-coloured clothing so others can easily find you in an emergency
- » Wearing appropriate clothing for all weather, including sun protection, layers, and closed-toed shoes
- » Bringing water in a refillable bottle to stay hydrated

Prepare the supplies you will need:

- » Garbage bags and/or bins for common litter
- » Puncture proof containers (e.g., hard plastic or metal with a lid) for hazardous litter
- » Gloves
- » Tongs, garbage pickers
- » First aid kit; hand sanitizer
- » Shovels, rakes, brooms (optional)

A limited supply of gloves, tongs, and puncture proof containers are available through CK Public Health by calling 519-355-1071. Learn more and watch our video about Safe Sharps Disposal on our website.

COVID-19 Safety Measures

- Stay 2 metres apart
- Wear a face covering
- Wash your hands frequently
- Stay home when you are sick
- Get tested if you have symptoms

Let's Get to the Point: Safe Clean-Up Instructions

Before heading out on your cleanup, make sure everyone knows how to safely collect common litter (e.g., food wrappers, masks, plastic cups, straws, bags, etc.) as well as more hazardous litter (e.g., razor blades, needles, broken glass, or other sharp objects). Plan ahead, be prepared, and teach children NOT to touch sharps and tell an adult if they find one.

Instructions for collecting common litter:

- 1. Before collecting, put on the appropriate personal protective equipment (face covering if within 2m of others, gloves, reflective vest).
- 2. If possible, use tongs or pick-up sticks to avoid direct contact with litter.
- 3. Collect debris into the appropriate bag or other container.
- 4. Take all necessary precautions, including being cautious near riverbanks or roads, having adults handle dangerous items, and supervising children closely.
- 5. Remember to wash or sanitize your hands frequently and when you are finished.
- 6. Make sure bags and bins are properly closed, and take to a local garbage disposal location.

Instructions for collecting more hazardous litter:

- 1. Put on gloves if you aren't already wearing them.
- 2. Place your puncture-proof container on a stable surface beside the hazardous litter (use any thick plastic, glass, or metal container with a lid).
- 3. Use tongs to carefully collect the hazardous litter. Keep sharp points/edges pointed away from you and never attempt to recap a used needle.
- 4. Place the item(s) into the container pointy end first and close the lid.
- 5. Remove gloves and wash hands with soap and water or hand sanitizer.
- 6. Bring the container to CK Public Health, 177 King Street East, Chatham, for disposal.

Talking to Children About Needles

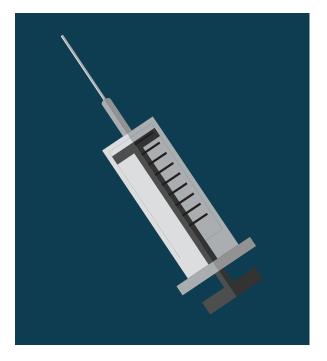

Because children are curious, you can expect they will have questions if they find sharps in the community. How you respond depends on your child's age and the information you feel comfortable giving to them. It is important to answer questions if you can. This may be a great opportunity to give your child valuable information for their safety and give them some understanding about an issue people may face in the community around them.

Teaching your kids about needle safety:

Show your child a picture of a syringe so they know what a needle looks like in case they find one.

If they find a needle, tell them:

- » Do not touch it. Needles can be sharp and may hurt you and they can have germs on them.
- » If you are playing with friends, tell them not to touch it while you get an adult.
- Tell an adult you trust about the needle. It's the adult's job to make sure the needle is thrown away properly.

This information has been adapted with permission from Lauri Watkins, www.seeaneedle.com

When a child asks: Why are there needles on the ground?

For young children, keep it simple: "People throw things away incorrectly all the time. People throw their cigarettes on the ground and coffee cups too."

Additional Information:

- Needles are used to put a medicine or a drug inside a person's body. When a needle has been used, it will have the person's germs on it. Because needles are sharp, they might cut/poke you if you touch them which would hurt and would expose you to their germs.
- People who have left a needle behind, likely did not leave it there to hurt anyone. Sometimes things are dropped by accident, and sometimes things are thrown away improperly because people do not know where to put them. We know it isn't safe to leave needles on the ground, so it is important to know how to clean them up and how to throw them away.
